

Home Energy Performance Audit Rate Schedule *(prices effective December 2009)*

Each Energy Performance Audit includes:

- Review with the homeowner their concerns and issues
- Tour of the entire home with homeowner
- Inspection of exterior, interior, attic, basement, crawlspace and all appliances
- Indoor and outdoor air quality monitoring (carbon monoxide, combustible gas, temperature, relative humidity)
- Calibrated blower door test to quantify leakage in the home's shell
- Infrared thermographic imaging as well as digital images used to identify and track heat gain or loss
- Efficiency and performance analysis of combustion appliances (furnace, boiler, water heater) where applicable
- Briefing at the end of the site visit on overview of findings
- Our bound written report containing all recommendations, findings and data within 2 weeks of the site visit – we will also email you the report if you wish
